

DE HEUS NURSE MEAL

THE IDEAL START
FOR GROWTH

Newborn piglets require proper nutrition to thrive. At this critical stage in their development, De Heus Nurse Meal supports vitality by promoting early feed intake.

This premium feed improves survival rates and ensures a higher, more uniform total intake before weaning, especially in larger litters. De Heus Nurse Meal provides all the essential nutrients your piglets need.

THE BENEFITS OF PIGLET NURSE MEAL

As a sow farmer, you want healthy, fast-growing piglets and high yields. Piglet Nurse Meal provides premium feed in the crucial weeks after birth and switches to standard feed once piglets are stronger.

- Improved survival rates
- Higher and more uniform pre-weaning intake
- Lower percentage of non-eaters at the moment of weaning
- Higher weaning weight
- Lower weaning dip

PREPARATION ADVICE (for 2 Liters)

De Heus Nurse Meal is a premium feed, carefully prepared with high value nutrients, specifically designed for the youngest category of piglets. Therefore, homogeneous mixing and clean conditions are essential, with water quality and temperature playing a crucial role. Follow the preparation instructions to ensure optimal results:

1. Boil 1,5 liter of water, leave 750 ml. for the next feeding in a closed bottle / bucket / jerrycan.
2. Mix 750 ml. hot water with 750 ml. water from previous feeding.
3. Dose 500 ml. of powder on top 1,5 liter of mixed water (55°C).
4. Mix powder and water for minimal 2 minutes, let it soak for 20 minutes and then mix it again for 2 minutes.
5. Close bags after usage, store dry and in the shadow.

FEEDING RECOMMENDATIONS:

- When prepared under clean conditions the shelf life is 12 hours .
- Clean the troughs minimum 4 times per day.
- Feed minimum 4 times per day (also for dry feed), preferable 8 times per day .
- 1 hour after feeding the piglets must have finished the feed (otherwise limit the dose next feeding).

OPTIMISING EARLY NUTRITION WITH DE HEUS NURSE MEAL

To support optimal growth and vitality in young piglets, De Heus Nurse Meal is designed to be offered as a liquid when used as a replacement for sow's milk—ensuring

maximum intake. When used as a supplement alongside sow's milk, it can be provided either dry or liquid. The guidelines below serve as a practical reference for both approaches. In all cases, ad libitum feeding is recommended to encourage natural intake and support uniform development.
